

Terms and Conditions

Code Complexity Predictor · Template document, last updated September 2026

1. Acceptance of terms

By creating an account or using Code Complexity Predictor ("the Service"), you agree to these Terms and Conditions. If you do not agree, do not use the Service.

2. What the Service does

The Service accepts source code you submit (pasted or uploaded) and returns a static analysis: structural metrics, an estimated time and space complexity, a risk score, and optimization suggestions. Submitted code is analyzed as text and is never executed.

3. Your content

You retain all rights to any code you submit. You are responsible for ensuring you have the right to submit that code for analysis, including with respect to any employer or client confidentiality obligations. We do not claim ownership over your submitted code.

4. Accounts

You are responsible for maintaining the confidentiality of your account credentials and for all activity under your account. Notify us promptly if you suspect unauthorized use.

5. Acceptable use

You agree not to use the Service to submit malicious code intended to test, probe, or exploit the Service itself, to abuse rate limits, or to attempt to reverse engineer the analysis pipeline.

6. Accuracy of results

Complexity estimates are heuristic and, where enabled, AI-assisted. They are provided for guidance and are not a formal proof of algorithmic complexity. The Service is provided "as is" without warranty of any kind, express or implied.

7. Limitation of liability

To the maximum extent permitted by law, the Service and its operators are not liable for any indirect, incidental, or consequential damages arising from use of, or inability to use, the Service.

8. Changes to the Service

Features, limits, and availability may change at any time. We will make reasonable efforts to communicate material changes.

9. Termination

You may stop using the Service at any time. We may suspend or terminate accounts that violate these terms.

10. Contact

Questions about these terms can be directed to the project maintainer through the channel this application was provided to you.
